PROBLEM STATEMENT

Brand risks hide in plain sight

- Risk of publishing unsupported claims
- Inconsistent brand messaging
- Outdated or unverified facts
- Use of unapproved logos and assets
- Missing mandatory disclaimers

OUR SOLUTION

Intelligent review before every publication

BrandGuard AI checks, corrects, and validates
so your content always stays on-brand and accurate.

KEY FEATURES

Everything you need to protect your brand at scale

Intelligent tools that review, validate, and safeguard every piece of content before it goes live.

TECHNICAL ARCHITECTURE

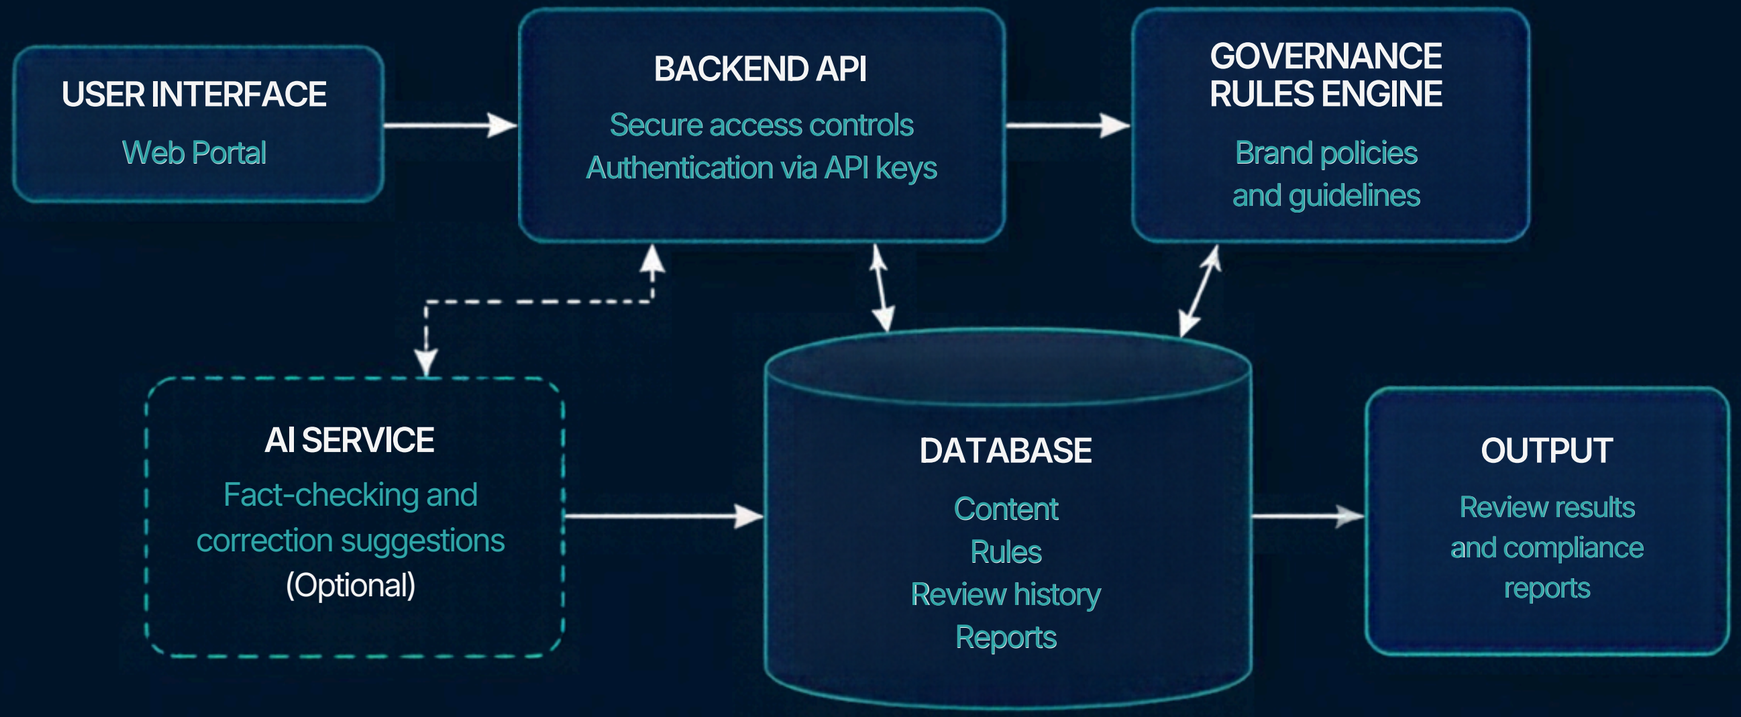

Built for secure, intelligent governance

Centralized governance
One platform to enforce brand policies at scale

AI-enhanced assurance
Fact-checking and suggestions improve content quality

End-to-end security
API key authentication and role-based access controls

Actionable insights
Clear review results and compliance reporting

Security and rroy privacy by design | Role-based access | Encryption in transit and at rest | Audit logging and traceability | Data isolation and confidentiality

DEMO AND EXPECTED IMPACT

From risk to approval

Projected outcomes

Fewer preventable brand risks reaching publication

Consistent brand messaging across channels

Faster content review cycles

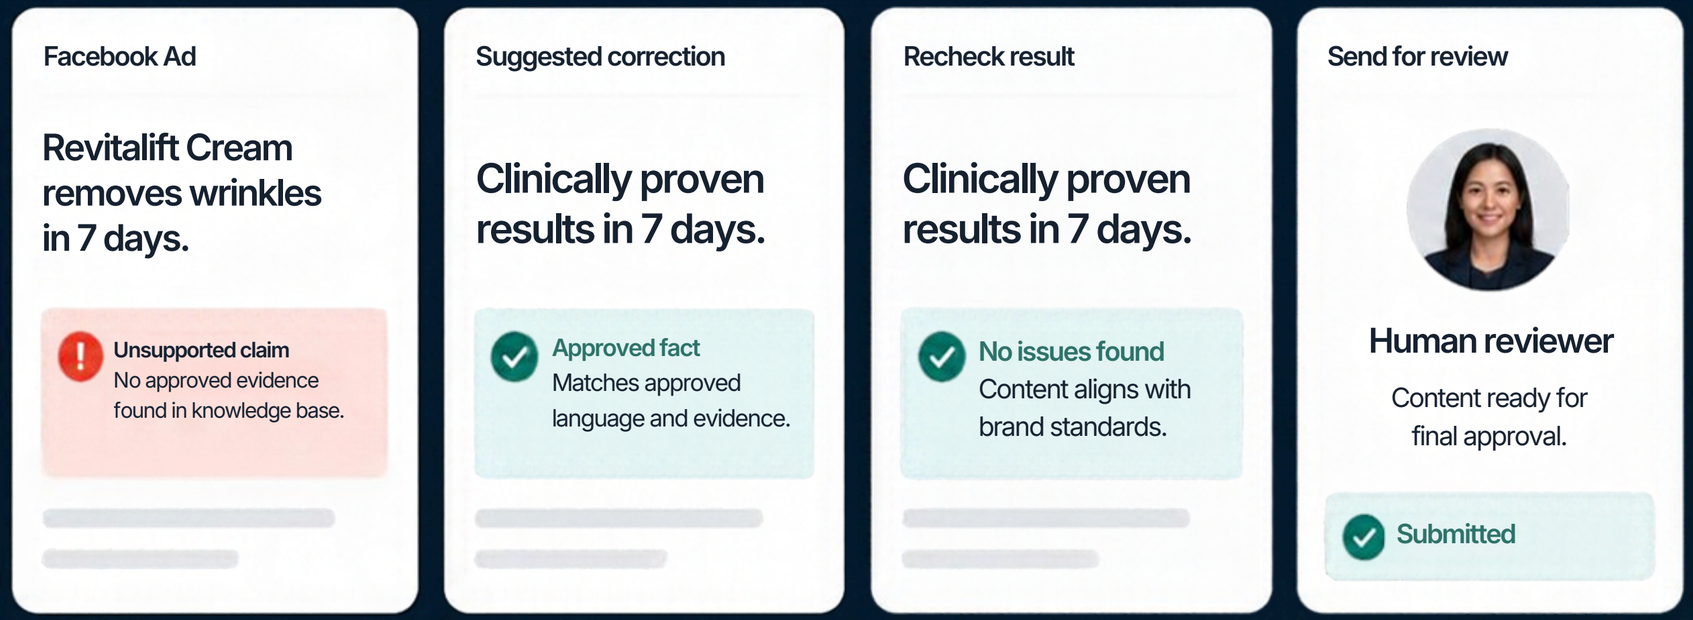

Enhanced governance insights for marketing teams

01 **Flagged claim** → Marketing claim identified as unsupported

02 **AI suggestion** → AI suggests correction using approved fact

03 **Recheck** → Content rechecked and cleared

04 **Human approval** → Sent to human reviewer for final approval

What this means

BrandGuard AI helps marketing teams catch unsupported claims early, apply approved language automatically, and move content to approval with confidence.

FEASIBILITY AND CONCLUSION

Catch brand risks before they reach your audience
